	Kinnaur	12.5
	Kullu	1719.5
Community Owned facilities	Mandi	150
Total		4383
Total (IN crore)		**43.83**

Category of Reactivation Assistance	Affected Establishments	Impact Duration (In Months)	Recovery Need Estimation (In Crore)	Remarks
Electricity Fixed Charges Levied on the Hotel Sector	3237	2	1.38	Data obtained from HPSEB as per actual demands charges raised by HPSEB during the affected period
Estimated Wages	35,682	2	194.46	Given that the

lost by Occupations in Tourism Sector				number of workers affected in the reported number of establishments have been multiplied by the number of working days lost and the product is further multiplied by the average wage rates thus arriving at the total income loss for the workers in tourism sector
Loss for Homestay units due to idle staff salary payment	2407	2	22.74	Given that one person is employed for one room in a homestay and total no. of permissible rooms is four per establishment. Further the period of loss is two months and the notified wage of labour and employment is Rs 350 per day. Thus estimated loss due to idle staff salary payment is a product of the three quantities mentioned.

Disaster Risk Reduction Initiatives

4. Disaster Risk Reduction

Proposal for Disaster Risk Reduction

The mountainous topography of Himachal Pradesh, which is categorised into three distinct physiographic units—the Lower or Outer Himalaya, the Middle Himalaya, and the Higher or Great Himalaya—significantly heightens its vulnerability to a diverse array of hazards. Furthermore, the geological composition, soil types, and localised climate fluctuations within each unit add complexity to the state's exposure to disaster risks.

Recognizing the urgent necessity for a comprehensive understanding of the disaster events experienced in 2023 and the additional vulnerabilities faced by the state, it becomes imperative to provide a comprehensive overview of Disaster Risk Reduction (DRR) measures from a multi-hazard perspective. These DRR measures should not only be integrated within the recovery interventions but should also be considered as sector-agnostic measures that encompass various development initiatives aimed at building a resilient Himachal Pradesh.

1. **Gaps/ Challenges observed in 2023 Disaster.**

(i) Lack of recognition of Himalayan Ecology in development activities.

The Himalayan region has witnessed a surge in development activities in recent years. While progress and development are crucial for the well-being of the region and its inhabitants, it is essential to acknowledge that the intricate Himalayan geology is sometimes overlooked in the process. The rapid expansion of infrastructure, including the construction of roads, dams, urbanisation, and the growth of tourism activities, often occurs without due consideration of the fragile geological foundations upon which these projects are built.

Large-scale road development, although vital for connectivity and economic growth, has disrupted the delicate Himalayan terrain. The steep slopes and susceptibility to landslides and erosion require meticulous planning and engineering solutions that respect the geological intricacies. Similarly, the construction of dams and hydropower projects can have geological consequences, potentially altering river courses and exacerbating the risk of seismic activity. Himachal Pradesh being a tourist destination has been hub of urbanisation and tourism. While these sectors promote economic opportunities, they can strain the region's resources and contribute to environmental degradation.

It is imperative that we strike a harmonious balance between development and environmental preservation in the Himalayan region. Engaging in comprehensive geological studies, involving local communities, and adhering to stringent environmental regulations can help mitigate the adverse impacts of development activities. Additionally, promoting responsible tourism and sustainable infrastructure planning can be catalysts for long-term growth while safeguarding the geological integrity of this magnificent

region. By recognizing and respecting the unique geological challenges of the Himalayas, we can foster a sustainable and prosperous future for both the people and the environment in this remarkable part of the world.

To address this situation there is need for optimisation of road design for Himalayan region in collaboration with National HIghway Authority of India, Border Road Organisation and State Public Works Department. At community level we need to strengthen community-based disaster risk reduction measures, which identifies localised risk.

(ii) High Landslide Vulnerability of the State.

Considering the high vulnerability of the State to Geological hazards particularly the earthquake and landslides and landslides experienced based on the studies carried out post 2023 monsoon indicate the need for a comprehensive Statewide landslide risk mitigation program, which includes both structural and non-structural measures in place.

(iii) Lack of comprehensive early warning systems in Place.

The state of Himachal Pradesh exhibits a diverse range of geo-climatic conditions, with variations often occurring within small geographical areas. To enhance our understanding and prediction of climate patterns, it is imperative to collect localised weather data encompassing parameters such as temperature, humidity, precipitation, and wind speed.

The existing weather monitoring network managed by the IMD (Indian Meteorological Department) is notably limited in its coverage is inadequate and presently, only 31 operational weather stations are in place. This sparse network falls short in capturing crucial data required for effective climate modelling and forecasting, resulting in a dearth of localised and actionable warnings for extreme weather events.

To address these challenges, there is an urgent need to expand and strengthen the weather monitoring network, following the Karnataka model, reaching down to the Panchayat level. Furthermore, establishing a centralised data centre at the state level for integrating and processing this data, coupled with AI-based early warning systems.

(iv) Lack of river boundaries and floodplains.

Another major concern is the lack of river boundaries is the increased risk of riverbank erosion. Without clearly demarcated boundaries, rivers are free to shift their courses during periods of heavy rainfall or snowmelt, leading to the erosion of riverbanks and adjacent lands. This erosion not only results in the loss of valuable agricultural land but also endangers human settlements and infrastructure situated in close proximity to the rivers. Furthermore, the absence of defined river boundaries hampers effective land-use planning , development regulations. It becomes challenging to establish setback distances and zoning regulations that account for floodplains and their dynamics. This leads to

unchecked construction and development in areas susceptible to flooding, increasing the potential for property damage and loss of life during flood events.

Inadequate river boundaries also impede disaster preparedness and response efforts. It becomes difficult to determine the extent of flood-affected areas and plan evacuation routes and relief efforts effectively. Without clear boundaries, flood forecasting and early warning systems may also be less accurate, leaving communities unprepared for impending disasters.

To address this issue, there is a pressing need for comprehensive river boundary mapping and the establishment of floodplain management guidelines in Himachal Pradesh. Clear river boundaries, demarcated based on scientific assessments of historical flood patterns and erosion risks, would not only enhance disaster resilience but also safeguard the environment and livelihoods of those living in flood-prone areas.

(v) Lack of insurance as a risk transfer mechanism for housing, crop and community infrastructure.

The lack of insurance or any other risk transfer mechanism for housing, crop and infrastructure development in Himachal Pradesh has emerged as an critical challenge, with field experiences highlighting these findings. It has become evident that most of the homeowners do not leverage house insurance, resulting in a substantial protection gap for property and infrastructure.

To address this issue, there is an urgent need for concentrated efforts by the State Government to promote insurance adoption, encompassing various sectors such as housing, agriculture, and infrastructure. Collaboration with insurance companies and the Insurance Regulatory and Development Authority (IRDA) can be instrumental in developing tailored insurance models, outreach mechanisms, and affordable insurance products that cater to the unique needs and vulnerabilities of the region.

2. Proposed Disaster Risk Reduction Interventions.

Immediate Disaster Risk Reduction Interventions required

1. State-wide Landslide Risk Mitigation Program
2. Strengthening community-based Disaster Risk Reduction measures
3. Joint initiatives for optimising road design
4. Strengthening the Early Warning System
5. Establishment of floodplain management guidelines
6. Strengthening Town and Country Planning Act and Building By Laws For Urban Disaster Risk Reduction
7. Establishment of Local Hill Area Development Authorities
8. Forecast based Dam Management Systems
9. Establishment of A Himalayan Centre for Disaster Risk Reduction

Long -term Disaster Risk Reduction Interventions required

1 Demarcation of floodplains, river boundaries & channelization
2 Statewide Landslide Risk Mitigation Programme.
3 Vision for Urban DRR through Risk Governance Approach

Immediate Disaster Risk Reduction Interventions

1. State-wide landslide risk mitigation program:

The aims of the study will be to mitigate the recurrent and destructive risks of landslides in Himachal Pradesh. It may also include comprehensive geological surveys and suggest both non-structural and structural mitigation strategies. These measures can be developed as part of a long-term program, potentially funded through dedicated channels for landslide risk mitigation.

Action Proposed: -

	Identification of chronic landslides in each district to be taken up for mitigation on priority mitigation in Himachal Pradesh in a programme mode		
2	Formulation of DPRSs for the chronic landslides involving the agencies empanelled at the HPSDMA level for undertaking mitigation measures along with detailed geotechnical /geophysical and geological investigation and mitigation measure.	Ist Phase	7 Cr
3	Bioengineering based solutions mainly vegetative propagation and development of nurseries with local species for protecting the landslide prone areas.	IInd phase	2 Cr
4	Capacity building of the Engineers, contractors and other stakeholders for landslide mitigation	IInd phase	1Cr
Total			10Cr

2. Strengthening Community-based Disaster Risk Reduction Measures:

The impact of floods and landslide in 2023, is both localised and widespread. This initiative empowers local communities in Himachal Pradesh to prepare for and respond

to disasters effectively. It includes capacity building, awareness campaigns, and the establishment of localised disaster risk reduction mechanisms, strengthening communities' resilience, particularly in remote areas.

	Action proposed for Community based DRR at PRI level		5 lacs for each PRI for total 3645 Panchayats and Nagar Panchayat =Rs.200 Cr
1	Creation of Panchayat Emergency Response Centres	Ist Phase	
2	Developing Panchayat level disaster management plans	Ist phase	
3	Disaster Preparedness, awareness	Ist phase	
4	Creation of Task Forces	Ist Phase	
5	Capacity building of PRI Members and local villagers and volunteer	Ist phase	
6	Equipping different panchayats with S&R kits, first aid kits, communication devices, lightening and power back up devices, water and sanitation kits, emergency shelter kits, and miscellaneous equipment's	IInd phase	
Total			200Cr

3. Joint initiatives for optimising road design:

To have focused conversation to understand the interconnectedness of road infrastructure with current disasters, there is a need for collaborative efforts between agencies like NHAI, BRO, GSI, HPPWD, and other technical agencies to optimise road design for the Himalayan region. As part of the DRR strategy, it is proposed to fund research on specialised road design, aiming to propose a design for highways, Major District Roads (MDR), and village roads that align with Himalayan ecology.

	Action proposal for Optimising Road Designs		10 Cr for evolving research programmes for optimising road designs involving expert institutions.
1	Identification of vulnerable road sections in different eco sensitive zones.	Ist phase	

2	Technological interventions for the road sectors in high altitude areas of the State prone for avalanches		
Total			10Cr

4. Strengthening the early warning system:

This initiative enhances the state's preparedness for extreme weather events. It involves the establishment of a centralised data centre and local weather monitoring systems in Gram Panchayats to enable better weather modelling, early warnings, and improved disaster response.

With only 31 weather stations currently operational, the state's weather prediction and early warning capabilities are limited. It is observed that the cloudburst in Himachal Pradesh were highly sporadic and the weather changes across all the hills, leading to highly diverse weather conditions and to manage extreme weather events granularity of weather data and penetration of early warning systems is extremely essential.

Under this initiative, the State Government has already signed MoU with IMD and would install 48 AWS/ARG/ASG at each Block level in the first phase for which DPR for an amount of 13.71 Cr is finalised. In the second phase, the instrumentation will be downscaled up to tehsil level and in the third phase the Government has planned to reach up to Panchayat level to have detailed micro level information on the meteorological parameters as part of strengthening the early warning mechanisms.

By making weather data more granular and accessible, this investment holds the potential to strengthen weather prediction, disaster preparedness, and response in the state. The following strategies would be adopted for strengthening the meteorological networks.

	Action proposal for Strengthening Early Warning Systems		
1	Monitoring network of 48 AWS/Arg/ASG up to Block level and 3 Data Centres and its integration with the IMD data	Ist phase	15 Cr
2	Monitoring network of AWS/ARG/ASG up to Tehsil level	IInd phase	35 Cr
Total			50 Cr

5. Establishment of floodplain management guidelines:

During the flood, large number of damages and losses happened because of construction in the flood's plains. Looking at this scenario it is essential to demarcate historic flood plains and have appropriate policy instruments and implementation mechanisms to restrict any construction in the areas. Clear guidelines need to be developed to define

setback distances and land-use regulations in flood-prone areas. These guidelines promote organised development and safeguard lives and property and the scientific assessments. To begin with, the flood zonation mapping is being proposed in different river basins as per the following details:

Actions Proposed:

Name of Basin	Phase	Tentative Budget	Proposed Activities
Beas	1st	7 Cr	• Updation of the drainage systems basins wise using high resolution satellite data. • Geomorphological mapping along the different river basins. • Identification of the potential vulnerable infrastructure along the low-lying areas. • Integration of the database with the SEOC for governance purpose
Ravi	2nd	1 Cr	
Satluj	3rd	2 Cr	
Total		10 Cr	

6. **Risk transfer program and support systems for insurance claims and outreach.**

	Promoting risk transfer programs		
1	Encourage local stakeholder about the risk programs and insurance uptake and providing incentives and subsidies and support panchayats to extent coverage to community buildings and assets etc.	Ist phase	30 Cr
Total			30 Cr

7. **Strengthening the Town and Country Planning Act and building by laws for Urban Disaster Risk Reduction.**

	Reducing Urban Risk Reducion		
1	Multi-hazard mapping and assessment of the major town through technological inventions such as seismic micro zonation,	Ist phase	10 Cr

	landslide zonation, land use planning based on Drone based Lidar surveys of the major vulnerable towns		
2	Building bye laws and its strict enforcement through sensitising the different stakeholders		

8. Establishment of local Hill Area Development Authorities:

In recent years, the Himalayan region has witnessed several disasters, including those in Joshimath in 2022 and Himachal Pradesh in 2023. The absence of adequate planning in hilly areas exacerbates existing vulnerabilities. It is crucial to establish a techno-legal framework to monitor and regulate development in these mountainous regions. The proposal involves launching pilot initiatives aimed at regulating rural construction and fostering sustainable development. This approach would be underpinned by a dedicated authority equipped with legal authority, technical expertise, and human resources, all directed towards enhancing rural development in a structured and sustainable way. A total amount of Rs.10 Cr is projected for this activity.

9. Forecast based Dam Management Systems -

Currently, there are 135 dams in the State however, which requires augmentation of a forecast based management and safety systems in place. With the advent of technology, it is important for Dams to function on prediction-based modelling and must account for 3-5 days of weather data from the catchments for flood warning.

	Dam Management Systems		
1	Densification of meteorological observation in the upper catchment	Ist phase	20 Cr
2	Real time monitoring of the meteorological inputs and its integration with the discharge estimation.		
3	Technological interventions for the real time monitoring and dissemination/sharing of information to the downstream.		

10. Establishment of a Himalayan Centre for Disaster Risk Reduction:

It is proposed to establish a centre to conduct scientific assessments, studies, and guide disaster risk reduction measures across all hill states in India. Collaboration and

knowledge sharing in the region enhance preparedness and resilience in the face of disasters. A Concept note **as Annexed** for the establishment of a dedicated Himalayan Centre for Disaster Risk Reducion (HCDRR) at the Himachal Institute of Public Administration to carry out the activities from the disaster perspective of the state and to full fill the mandate of the vision as envisaged for undertaking different Disaster Risk Reducion measures across the State. A total amount of Rs.25 Cr is projected for the establishment and running of the HCDRR in the first phase.

The overall budget required for implementation of the proposed interventions for Disaster Risk Reduction is:-

S.no	**Proposed Interventions**	**Proposed Amount (In Crore)**
1	Statewide landslide risk mitigation program to include studies, non-structural and structural mitigation measures	10
2	Strengthen Community based Disaster Risk Reduction Measures in each gram Panchayat with approximate budget of 5 lakh per Gram Panchayat	200
3	Joint initiatives of State PWD, with NHAI, BRO along with research institutions to optimise road design (MDR, ODR and VR) as per Himalayan geology. The initiative may include studies to understand impact of roads and propose new design of roads in Hilly regions	10
4	Strengthening early warning system by providing local weather monitoring systems in each gram panchayat, set up a centralised data centre at the state level and integrating with State Emergency Operation Centre for weather modelling and predictions, forecasting and dissemination of early warning. 48 AWS/ARG/ASG upt to Block level (First phase) 3 Data Centre (First phase) 90 AWS/ARD/ASG up to Tehsil level (Second phase) 35 AWS/ARG/ASG (Third phase) up to Tehsil level.	50

6	Conduct studies and Establish floodplain management guidelines and define setback distances based on scientific assessments.	10
7	Statewide risk transfer program to develop insurance models, establish support systems to access insurance claims and outreach for penetration of insurance schemes in collaboration with insurance companies and IRDA	30
10	Strengthening and enhancing Town and Country Planning Act with appropriate policy instruments	10
11	Establish local hill area development authority, to regulate construction in the rural areas by appropriate legal support, technical capacities and human resources on Pilot basis.	10
12	Forecast based dam management system	20
12	Establish Himalayan Centre for Disaster Risk Reduction to conduct scientific assessments, studies and guide disaster risk reduction measures across all hill states in India **(As Annexed)**	25
	Total	375 Crore

Summary: In view of the multi hazard vulnerability of the State, there is an urgent need to adopt proactive approach for reducing the hazard risk at different platforms. The DRR measures should not only be integrated within the recovery interventions but should also be considered as sector-agnostic measures that encompass various development initiatives with the objective to build a disaster resilient mountain state. The proposed DRR initiatives as envisaged would help in achieving the targets of reducing the hazard vulnerability and its risk from different hazards across the state and would provide safe environment to the stakeholders in consonance with the Sustainable Development Goals.

To summarize in the context of climate change and disaster risk reduction in view of the Sendai Framework which states that emphasis should be on adopting measures that addresses three dimensions of disaster risk: exposure to hazards, vulnerabilities and hazard characteristics. Its primary goal is to prevent the creation of new risk, reduce existing risk and enhance resilience and within context of Himachal Pradesh from climate change, the level of risk exposure has increased considerably over a period. According to 2022 IPCC report, the two key regions in Indian Subcontinent are

particularly vulnerable to climate induced disasters i.e the Indian Himalayan Region (HR) and Coastal Region (CR).

Annexure

Proposal for the Establishment of the Himalayan Centre for Disaster Risk Reduction (HCDRR) in Himachal Pradesh for DRR Activities

Background:

Mountain areas are highly vulnerable to natural disasters where development over the years has compounded the problem by upsetting the natural balance of various physical processes. The increased pressure on the mountain environment has contributed in some measure to environmental problems such as landslides, land subsidence, removal of vegetation and soil erosion. According to one estimate, about 58.36% of the land is subjected to intense soil erosion, majority of which is located in the Himalaya. The State of Himachal Pradesh, which forms part of the Western Himalaya, is environmentally fragile and ecologically vulnerable. Geologically the Himalaya is considered to be the youngest mountain chains in the world and is still in the building phase. Natural hazards are matter of immediate concern to the State of Himachal Pradesh, as every year the State experiences the fury of nature in various forms like landslides, cloud bursts, flash floods, snow avalanches and droughts etc. The fragile ecology of the mountain state coupled with large variations in physio-climatic conditions has rendered it vulnerable to the vagaries of nature. The incidence of cloudbursts in the last few years has been unprecedented. Notwithstanding, the continuous efforts made by the Government to cope with natural hazards through relief and rehabilitation measures, landslides and snow avalanches continue to inflict widespread harm and damage to human life as well as property. The roads that are the State's lifeline are repeatedly damaged, blocked or washed away by one or other acts of nature. In the circumstances, the Government has to divert the already scarce resources of the state for relief and rehabilitation measures.

Physio- graphically, the State has been divided into three broad units: the Lower or Outer Himalaya, the Middle Himalaya, and the Higher or Great Himalaya, and each unit is susceptible to different types of hazards depending upon the lithology, soils, and local climatic variations. Due to the diverse topography of the area, the flood problem in the State is largely isolated in nature. The monsoon, apart from acting as the lifeline in the young, lofty, and fragile mountain belt of the Himalaya, becomes a potential cause for disturbing slope stability, inflicting heavy loss of life, and damaging Government, private,

and public property. High monsoon rains in the areas of the Shiwalik and Lower and Mid Himalayan ranges cause extensive floods during the rainy season. In the upper reaches of the Beas and Satluj valleys, the main problems are flash floods and bank erosion because of the steep slopes of rivers and High River flows due to heavy rains. Often, flash floods caused by cloudbursts and temporary blockages of the river channels have also been observed. Extremely high-intensity rainfall events over a short period of time, or 'cloudbursts, as they may be called, are a natural phenomenon in the Himalaya and have been found to be a dominant factor in causing extensive damage in different parts of the State during the monsoon period every year.

Himachal Pradesh is vulnerable to 25 out of 33 types of hazards identified by the High Powered Committee (HPC) of Government of India and categorised into 5 sub-groups. Apart from identified hazards by HPC, the state is also confronting the emerging threats of climate change and man and animal conflict. As per one of the study carred out based on the vulnerability matrix assigning qualitative weight age in the scale of 0-5 for different hazards such as earthquakes, landslides, avalanches, industrial hazards, construction type and density of population. District wise matrix was prepared by evaluating the risk severity. The evaluation also gives weight age to the density of population likely to be affected. The matrix also includes the evaluation of hazards likely to be induced on account of development of projects such as hydel projects, roads industries etc. In case of earthquake vulnerability, the district Kangra, Hamirpur and Mandi falls in very high vulnerable category on the basis of the matrix devised. The districts which falls in high earthquake vulnerability are Chamba, Kullu, Kinnaur and part of Kangra and Shimla districts, whereas the moderate and low vulnerable districts are Una, Bilaspur ,Sirmour and Solan, Shimla and Lahaul & Spiti districts respectively. The landslide vulnerability in case of Chamba, Kullu, Kinnaur and part of Kangra and Shimla districts is high followed by Kangra, Mandi, Bilaspur, Shimla,Sirmour and Lahaul & Spiti districts falling in moderate vulnerable category. The areas falling in low vulnerable category are in the districts of Una, Hamirpur and Solan. The avalanche hazard vulnerability map suggest that the districts of Lahaul & Spiti and Kinnuar are very high vulnerable followed by Chamba, Kullu and part of Kangra and Shimla as moderate vulnerable areas where as the remaining districts falls in the category where avalanche hazards are nil. The flood hazard vulnerability map indicates that the areas falling in the

districts of Chamba, Kullu ,Una and Kinnaur falls in high vulnerable districts where as the Lahaul & Spiti, Mandi, Shimla , Kangra,Hamirpur, Bilaspur, Solan and Sirmour falls in moderate and low vulnerability areas. The overall vulnerability of the state on the basis of the matrix clearly suggests that the district Chamba, Kinnuar Kullu and part of Kangra and Shimla falls in very high vulnerable risk. Similarly district Kangra, Mandi, Una ,Shimla and Lahaul and Spiti falls in high vulnerable risk status. The district Hamirpur, Bilaspur, Solan and Sirmour falls in moderate vulnerable risk status. The disaster management strategies and infrastructure required to be evolved by taking the above factors into consideration.

Table: District Wise Vulnerability Matrix

DISTRICT	EARTHQUAKE	LANDSLIDE	FLOODS	AVALANCHES	INDUSTRIAL	OVERALL VULNEABILITY
Kangra	VH	M	L	-----	M	H
Chamba	H	H	H	M	M	VH
Hamirpur	VH	L	L	-----	-----	M
Mandi	VH	M	M	-----	-----	H
Kullu	H	H	H	M	H	VH
Bilaspur	M	M	L	------	M	M
Una	M	L	H	------	H	H
Sirmour	M	M	L	-------	H	M
Solan	L	L	L	-------	H	M
Kinnaur	H	H	H	VH	H	VH
L&Spiti	L	M	M	VH	-------	H
Shimla	L	M	M	--------	H	H

VH: Very High, H: High, M: Moderate, L: Low

Source : State Council for Science Technology & Environment Analysis

Monsoon Disaster of 2023

During the monsoon period of 2023, the State witnessed widespread damage to infrastructure, loss of human lives, besides the financial loss to the Govt. exchequer of more than 10,000 Crores due to flash floods, landslides and cloud bursts in different parts of the State. The major loss in the State was occurred in two different spells of monsoon

depressions. The first monsoon depression that coincides with that of Western Disturbance during the period 9-11 July 2023 resulted very heavy damage and destruction in the State followed by the second spell during 13-16 August 2023, wherein, the continuous and heavy precipitation resulted heavy damage again in the differ districts of the State.

In order to make a broad assessment of the damages that occurred, an Inter-Ministerial Central Team (IMCT) visited the State from 19-21 July 2023 and had reconnaissance survey of affected areas. Thereafter to work on the recovery and reconstruction, the State Government carried out the Post Disaster Needs Assessment (PDNA) in consonance with the SoPs defined by the Govt.of India manual, which would help in the valuation of the physical damages and the economic losses suffered leading to identify the immediate, short-term, and long-term needs of the affected areas, enabling to have effective recovery and reconstruction plan. Accordingly the PDNA exercise for the whole State was carried out in two different phases with the technical backup of National Disaster Management Authority (NDMA) MHA, Govt. of India, New Delhi. The final report was finalised and submitted to the Govt. of India for further action. The final document has also been circulated to all Administrative Secretaries, Heads of Departments (HoDs), and Deputy Commissioners. This report outlines various Disaster Risk Reduction (DRR) interventions designed to enhance the State's resilience against disasters.

The complete document encompasses detailing of the damage occurred in 9 different sectors such Housing, Education, Health, Public Buildings and Civic Amenities , Road & Transport, Drinking Water & Sanitation, Power, Agriculture & Allied Sectors and Tourism, wherein complete analysis based on the damage occurred, restoration and recovery needs have been worked out. Special focus has been given on the disaster risk reductions from the State’s perceptive and DRR strategies with reference to all hazards have been taken into consideration in the Disaster Risk Reduction Chapter. A way forward along with Climate Adaptation for a Resilient Recovery are the part of this document.

The Post Disaster Needs Assessment (PDNA) carried out reveals a consolidate damage and assessment of across the three primary sectors of development i.e Social ,Infrastructure and Productive sectors. The social sectors comprising housing, education, health and communities buildings and amenities reveals that housing sector was impacted badly due to flash floods, landslides and cloud bursts during this disaster. In this sector, a total of 6146 pucca houses, 4992 kutcha and semi pucca, 4796 huts and 8951 cow sheds besides a total of 523 health facilities were either totally, severally or partially damaged in the State. Besides, 237 No. of community buildings such as AWCs, MM & YM Bhawan and 1209 No. of School buildings were damaged or destroyed. The estimated combined damage & loss to the Housing sector (2308.91 Cr), Education sector (369.39Cr), Health (183.64 Cr), Community Buildings and Amenities (37.04 Cr). In Infrastructure sector comprising Roads, Drinking Water & Sanitation and Power , the

estimated combined damage & loss was in Roads (1632.80Cr), Water (2668.31 Cr) and Power (279.56 Cr) respectively. Likewise the productive sector comprising Agriculture, Horticulture, Animal husbandry, Fisheries and Tourism suffered a total damage and loss to the tune of Rs.822.65 Cr during this disaster.

Recognising the urgent necessity for a comprehensive understanding of the disaster events experienced in 2023 and the additional vulnerabilities faced by the State, there is an urgent need to put up an effective Disaster Risk Reduction implementation mechanism in the State. These interventions will not only be integrated within the recovery interventions but should also be considered as sector specific measures encompassing various developmental initiatives aiming to build a disaster resilient Himachal Pradesh.

Based on the PDNA analysis, some of the gaps and challenges identified and the interventions required for having effective disaster Risk Reduction (DRR) measures from a multi-hazard perspective are as under:-.

- Lack of recognition of Himalayan Ecology in Development Activities.
- Sporadic and State-wide incidents of landslide
- Lack of comprehensive Early Warning Systems in place.
- Lack of River boundaries and floodplains.
- Lack of insurance as a risk transfer mechanism for Housing, Crop and Community Infrastructure
- Implementation and efficacy of Town and Country Planning Act In Himachal Pradesh

In order to addresses these challenges and fill up the gaps, certain actions have been proposed as part of the recommendations of the PDNA document which heeds to be taken up by the State Government on priority to strengthen the DRR measures across the State. These measures can be developed as immediate actions required and the long term program to strengthen Disaster Risk Reduction mechanism in the State. Some of the important recommendations are as under:-

Rationale for Establishing Dedicated Centre in the State

Considering the vulnerability of the State, there is a need for effective steps to build safer and disaster resilient Himachal by developing a holistic, pro-active, multi-disaster, technology driven and community-based strategy for disaster management through collective efforts of all Government agencies and Non-Governmental Organizations (NGOs). In view of the immediate and long-term recommendation made, it is imperative that systematic and scientific based studies are carried out with reference to different hazards in the State. This would call for mounting research and data collection from the perspective of States vulnerability for different hazards and also sensitize the different organs of the government machinery to appreciate the climate induced impacts

and start preparing and adapting the changes by recasting the strategies and policies. To have the systematic and sectoral specific multi hazard studies for reducing disaster risk in the State, a dedicated Himalayan Centre for Disaster Risk Reduction (HCDRR) is proposed to be established in the State of Himachal Pradesh as part of the recommendations of the PDNA studies. The proposed center will not only be coordinating all scientific studies, scientific assessments, capacity enhancements of different organs of the Government, programmes, for reducing disaster risk but will also facilitate the formulation of policies and strategies for the Government of Himachal Pradesh and guide disaster risk reduction measures across the State in particular.

Considering the rationale, the Centre would broadly focus on the following to provide the technical support to HPSDMA in the following areas of specialization:-

- **Centre will provide all inputs to HPSDMA through various studies/assessments and reports etc.**
- **Scientific studies /inputs with reference to the Geological Hazards particularly the Landslides, Earthquakes, Snow Avalanches and Floods etc.**
- **Technological interventions to reduce the hazard vulnerability**
- **Preparation of modules for the Capacity enhancement of different organs of the State Government**
- **Undertaking regular programmes of capacity building on behalf of the HPSDMA.**
- **Formulation of policies and strategies to reduce the disaster risk and its integration with the climate change**
- **Sector specific studies to reduce the climate induced hazard threat, creation of data base for the flood regulations and floods zonation using latest technological tools like RS&GIS.**
- **Risk based studies for Planning and Preparedness**
- **Techno-Legal Regime**
- **Vulnerability Reduction**
- **Integration of Science, Research and Practice**
- **Recommendations to Government of India/NDMA**

Considering the hazard profile of Himalayan States in view of the frequency of the disaster events like that of Kedarnath tragedy of 2013, Joshimath in 2022 and recently the Himachal Pradesh and the Sikkim, it is crucial to establish a techno-legal framework to monitor and regulate development in the mountainous regions and thus there is an urgent need to have a risk sensitive land-use planning for all urban areas in the hill states. By integrating the Hazard Risk and Vulnerability Assessment (HRVA) risk sensitive land-use planning should be prepared. To begin with pilot initiatives can be taken up aiming at regulating rural constructions and fostering sustainable development. To achieve this, a dedicated authority equipped with legal authority, technical expertise

and human resources all directed towards enhancing rural development in a structured and sustainable way should be put in place as part of the disaster risk reducing initiative at the State level.

Himalayan Centre for Disaster Risk Reduction (HCDRR)

Considering the multi hazards vulnerability of the State, the State Government under the upcoming external funded project of French Development Agency (AFD) under Himachal Pradesh Disaster Risk Reduction and Preparedness Program (HP DRRP) has proposed to set up a Himalayan Centre for Disaster Risk Reducion at Himachal Institute of Public Administration (HIPA) keeping in view the following objectives:-

- To serve as a centre of excellence on disaster mitigation and management.
- To provide disaster management related training to all the stakeholders.
- Carry out research-oriented studies in matters concerning causes and effects of disasters, their mitigation, management and other state of art techniques. The Centre may act as a resource centre and clearing house of information on disaster management by documentation of field experiences including case studies, lessons learnt and best practices.
- To undertake quality research projects on disaster management and mitigation covering both natural and human induced disasters.
- Carryout the certification of disaster management plans.
- Development of policies, regulations and programmes of disaster management as per the disaster management act 2005.
- Institute awards, scholarships, fellowships, prizes and medals etc. for furtherance of the aims and objectives of the society.
- To assess the training needs of different government departments, offices, boards, corporations, local bodies and non-government organizations and others who may consent to be associated with it.
- To undertake activities for human resource development, public education and community awareness, safety etc. in disaster education and management.
- To establish and maintain libraries and spread knowledge of disaster management.
- To facilitate partnership with reputed national and international organizations, universities, institutions, bodies and individuals specialized in disaster management.
- To undertake publication of newsletters, journals, reports, occasional papers, study reports etc.
- To build working partnerships with the Government, universities, NGOs, corporate bodies and other national and international Institutes of eminence.

To summarize in the context of climate change and disaster risk reduction in view of the Sendai Framework which states that emphasis should be on adopting measures

that addresses three dimensions of disaster risk: exposure to hazards, vulnerabilities and hazard characteristics. Its primary goal is to prevent the creation of new risk, reduce existing risk and enhance resilience and within context of Himachal Pradesh from climate change , the level of risk exposure has increased considerably over a period of time. According to 2022 IPCC report, the two key regions in Indian Subcontinent are particularly vulnerable to climate induced disasters i.e the Indian Himalayan Region (HR) and Coastal Region (CR).

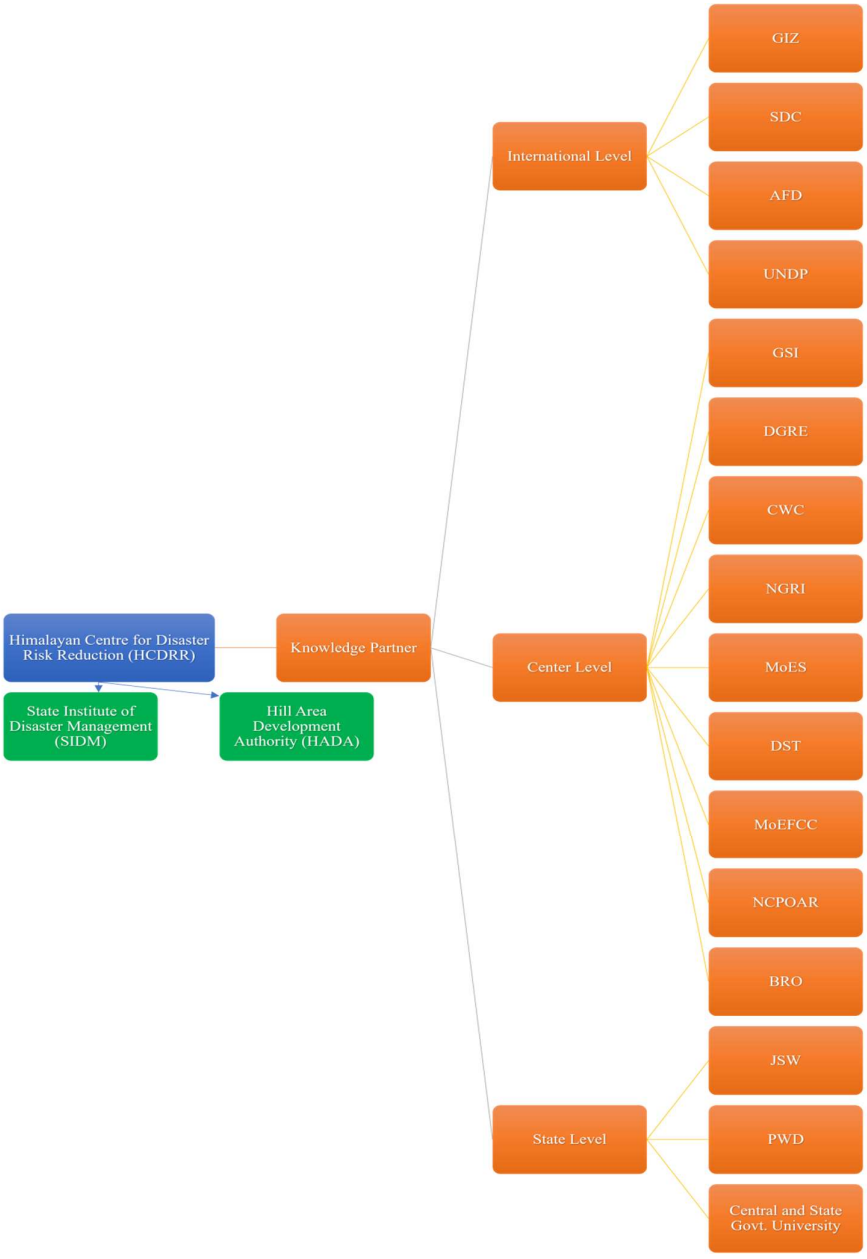
Hosting of the HCDRR:

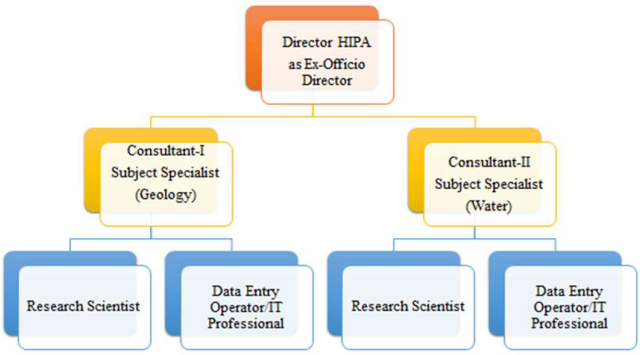
In view of the recommendations of the PDNA report and the proposal of the State Government, the Himalayan Centre on Disaster Risk Reduction will be housed in the Himachal Institute of Public Administration (HIPA) and the two major initiatives i.e Hill Area Development Authority and the HCDRR will be its subsidiaries.

Funding Mechanism:

The HP State Disaster Management Authority (HPSDMA) of the State Government will provide all financial support from the SDMF to establish the HCDRR at HIPA , whereas the logistics support will be provided by the HIPA Administration. The Director, HIPA will be the Ex-Office Director of the HCDRR.

Broad Structure of HCDRR





Governing Body

To review and provide all possible guidance in operationalization of the Himalayan Centre for Disaster Risk Reduction, a Governing Body will be constituted. The Governing Body will comprise of Members from Administration, Academia, Research institutions, NGOs/ Civil Societies etc.. The broad structure of the Governing Body will be as under:

1.	Additional Chief Secretary (Rev) , Govt of H.P.	Chairman
2.	Director-cum- Spl. Secretary (Rev-DM) Govt of H.P.	Member Secretary
3.	Director-cum- Ex-Officio (HCDRR), HIPA	Member
4.	Administrative Secretary (RD & Panchayati Raj) Govt of H.P.	Member
5.	Administrative Secretary (Jal Shakti Vibhag) Govt of H.P.	Member
6.	Administrative Secretary (PWD) Govt of H.P.	Member
7.	Director (DEST &CC)	Member
8.	PCCF (HOFF)	Member
9.	Member Secretary (HIMCOSTE)	Member
10.	Director (Agriculture)	Member
11.	Director (IMD)	Member
12.	Director DGRE Chandigarh	Member
13.	Director (GSI) Chandigarh	Member
14.	Director (NCS) New Delhi	Member
15.	Director (Horticulture)	Member
16.	Director , Geo-hazards, New Delhi	Member
17.	Director, Indian Mountain Initiative (IMI)	Member

****
